

Remediation Evidence — YouTube API Services ToS Violations Report V.1

API Client: Gala Labs Co., Lt · Project number 197088978210 · Report dated August 13, 2026

This document shows, side by side, the state of our product **before** and **after** the changes made in response to your report. Every "after" screenshot reflects what is live now at <https://galla.im>. Both columns were captured in the same browser, at the same viewport (1400 × 1000), in the **English locale**.

Policy	What you reported	What we changed
III.D.1c	Confirm whether multiple project numbers are used.	Two projects exist; both disclosed. Only <code>galla-youtube</code> (197088978210) accesses YouTube API Services. <code>galla-analytics</code> (634912808454) is Google Analytics only — YouTube Data API v3 is not enabled there.
III.A.2g	Privacy policy does not disclose storing, accessing or collecting information on or from users' devices, including cookies or similar technology.	New Section 11, written using your policy's own verbs, covering cookies, local storage, service worker cache, device identifiers and push tokens — and third-party storage by YouTube/Google, Supabase and Cloudflare, with instructions for refusing it.
III.A.2i	API Client does not provide contact information.	Added to both documents named by this policy: Privacy Policy Section 12 and Terms of Use Article 17. The privacy policy previously held an unfilled placeholder; the Terms of Use had no contact details at all.
III.E.4h	Independently calculated or derived metrics. "Kindly replace the highlighted symbol with the term <i>likes</i> ."	The heart symbol is gone and the word "likes" is now shown. Our own like is labelled "GALLA likes". On the two screens you highlighted, our metric panels are no longer rendered, and trending counts now state their source.
III.F.2a	YouTube logos and icons do not follow the Branding Guidelines; the icon must follow the shape and colour and never be smaller than 20dp.	Three defects: hand-drawn instead of the official asset, shown monochrome while inactive, and rendered at 13–16px. Replaced with the official YouTube icon — unmodified, always full colour, at 20dp — in every position that stands for YouTube.

Reading the annotations. Red boxes on the left ("BEFORE") mark the elements your report highlighted. Green boxes on the right ("AFTER") mark the same position after remediation.

III.F.2a Branding — trends hub

Screen /search · the first screenshot on page 5 of your report

Our own drawing of the YouTube mark, on the video tab and on the video entry of the onboarding list. It rendered at 15–16px, below the 20dp minimum, and turned monochrome while the tab was inactive. The number column at right carried no stated source.

Both positions now carry the official YouTube icon, unmodified and in full colour — 20dp on the tab, 22dp in the list. There is no longer an inactive-state variant, so the mark is never recoloured. A caption above the keyword list now states where its figures come from.

III.F.2a

+

III.E.4h

Video section

Screen /search?tab=hot · the "Long-form" toggle is the element highlighted in the second screenshot on page 5

Top: the same hand-drawn mark on the tab and on the "Long-form" toggle. Right: our own issue vote tallies and prediction feature sat directly beside YouTube content, which could reasonably be read as metrics derived from it.

The tab carries the **official YouTube icon at 20dp**. The "Long-form" toggle is one of our own filter controls, not YouTube, so it no longer uses a play symbol at all — it is now a plain landscape rectangle denoting aspect ratio, with a portrait one beside it for "Shorts". Both metric panels are gone from this screen.

III.E.4h Watch screen — the "likes" wording

Screen /watch · pages 2 and 3 of your report

The element you highlighted: a heart symbol labelled only "Like". Right: the same two panels ("Live Standings", "Today's Prediction") beside the player.

The control now reads "GALLA likes" — the word is always present, and the GALLA prefix makes clear the count is ours and not YouTube's. Both metric panels are gone from this screen.

Where we show **YouTube's own** like count, on the video cards, the custom heart icon has been removed and the word "likes" now follows the value returned by the API, shown unmodified. We do not compute or publish any metric derived from YouTube API data.

III.E.4h What the other highlighted panels are

The screenshots on pages 2 (lower), 3 and 4 — features we did **not** change, and why they are not derived metrics

Our home screen. Each of our own panels carries the GALLA name on its face — "GALLA Issue Standings", "GALLA Prediction" — in its own card, separate from the video list.

Element	What it is, and where the number comes from
Live Standings (now "GALLA Issue Standings")	Counts of agree / disagree votes cast by GALLA users on debate topics written on GALLA. Source: our own database. Not about videos.
GALLA Prediction YES / NO percentages	A prediction feature on general news, economy and sports questions authored by GALLA and its users. The percentages are the distribution of in-app points our users have placed on each side.
"Trading volume ... P"	The total of those in-app points. "P" is GP, a virtual point that exists only inside GALLA; it cannot be cashed out and has no monetary value.
Trending keyword counts	Either mentions aggregated from issues and news inside GALLA, or figures supplied by Google, Naver or Nate·Zoom, depending on the source tab the user selects. The source is now stated on screen above the list.

None of these values takes any input from the YouTube API, and none of the topics is about a YouTube video. They are not calculated from YouTube data, do not replace anything YouTube provides, and are never presented as YouTube figures.

III.F.2a Branding — community screen, and every position

Screen /plaza · a second copy of the same tab bar

The same hand-drawn mark appeared here because the tab bar had been duplicated into a second file — which is why our first pass missed it.

The official icon here too.

Official YouTube icon — every position that stands for YouTube

- the video tab, on both screens carrying that tab bar
- the section header above the trending video list
- the section header for video results in unified search
- the video entry in our onboarding guide
- the corresponding step of our product tour
- the video entry in our secondary navigation menu

Verified on production: the mark renders 20×20 with fill `rgb(255, 0, 0)` on a black background, inside a control that navigates to our video screen. No monochrome variant of it remains anywhere.

Our own controls — no play symbol at all

- the "Long-form" and "Shorts" filters above the video list
- two write-shortcut icons in our secondary navigation

These label our own controls, not YouTube. We removed the play symbol from them entirely and use plain landscape / portrait rectangles that convey aspect ratio, so nothing in our interface resembles a YouTube mark unless it is the official icon.

III.A.2i Contact information

Added to both documents named by this policy

BEFORE — Privacy Policy	10. 콘텐츠에 대한 책임 이용자가 게시한 콘텐츠의 책임은 작성자 본인에게 있으며, 회사는 이용자의 의견 주장 판단에 대해 책임을 지지 않습니다. 11. 개인정보 보호책임자 회사는 개인정보 처리에 관한 업무를 총괄하는 개인정보 보호책임자를 두고 있습니다. - 개인정보 보호책임자: (성명/직책 기재 예정) - 문의:  gallakorea@gmail.com 12. 개인정보 처리방침의 변경 본 방침은 법령 또는 서비스 변경에 따라 수정될 수 있으며, 변경 시 서비스 내 공지를 통해 안내합니다. 13. YouTube API 서비스 이용 본 서비스의 '유투브' 기능은 YouTube API 서비스(YouTube API Services)를 이용합니다. 이용자는 본 기능을 사용함으로써 YouTube API
-------------------------	--

The section existed but the responsible person was an unfilled placeholder — literally "(name/title to be entered)".

AFTER — Privacy Policy	12. 개인정보 보호책임자 회사는 개인정보 처리에 관한 업무를 총괄하는 개인정보 보호책임자를 두고 있습니다. - 운영 주체: Galla Labs Inc. - 개인정보 보호책임자: 대표이사 - 문의 이메일: gallakorea@gmail.com - 서비스 내 문의: 고객센터 · 앱/웹 하단 '버그 신고' - 회신: 접수일로부터 영업일 기준 3일 이내 개인정보 침해에 대한 신고 상담은 개인정보침해신고센터(privacy.kisa.or.kr, ☎118), 대검찰청 사이버수사과(☎1301), 경찰청 사이버수사국(ecrm.police.go.kr, ☎182)에도 하실 수 있습니다.
------------------------	--

Operator, responsible person, email, in-product support routes, response time.

Because this item sits under **API Client Terms of Use and Privacy Policies**, we added the same block to our Terms of Use, which previously carried no contact details at all.

BEFORE — Terms of Use	제16조 (면책 조항) 회사는 이용자 간 분쟁에 개입하지 않으며, 서비스 이용으로 발생한 판단이나 결과에 대해 책임을 지지 않습니다. 제16조 (준거법 및 관할) 본 약관은 대한민국 법을 준거법으로 하며, 분쟁 발생 시 관할 법원은 「민사소송법」에 따른 관할 법원으로 합니다. 본 약관은 2026년 7월 24일부터 시행합니다.
-----------------------	--

The document ended at Article 16 with no way to reach us.

AFTER — Terms of Use	제16조 (준거법 및 관할) 본 약관은 대한민국 법을 준거법으로 하며, 분쟁 발생 시 관할 법원은 「민사소송법」에 따른 관할 법원으로 합니다. 제17조 (사업자 정보 및 연락처) 이용자는 아래 연락처로 서비스 이용, 약관, 결제 환불에 관한 문의 및 이의를 제기할 수 있습니다. - 운영 주체: Galla Labs Inc. - 서비스명: GALLA (갈라) — https://galla.in - 문의 이메일: gallakorea@gmail.com - 서비스 내 문의: 고객센터 · 모든 화면 하단의 '버그 신고'
----------------------	---

New Article 17 — "Company information and contact".

Our policies are published in Korean. In translation: Operator — Galla Labs Inc. | Data Protection Officer — Representative Director | Contact email — gallakorea@gmail.com | In-service — Help Center and the "Report a bug" entry in the footer of every page | Response — within 3 business days. A full English translation is available on request.

III.A.2g Disclosure of on-device storage and access

A new section was added at the same position in <https://galla.im/privacy>

No section on device storage. Cookies appeared only as one word inside a list of automatically collected items, with no mention of local storage, service worker cache, or third-party storage and access.

New Section 11. It uses your policy's own verbs — we **store** information on, **access** information from and **collect** information from users' devices, including by **placing, accessing or recognizing** cookies or similar technology, directly or indirectly, and including where we allow third parties to do so.

Section 11 discloses — in translation	Third-party storage and access
• Cookies — login state, security, language/region preferences • Local storage (localStorage, sessionStorage, IndexedDB) — auth tokens, draft posts, UI preferences, recently viewed items • Service Worker cache — offline reading, load performance • Device / browser identifiers — device type, OS, browser, screen size, language, IP • Push notification tokens — only when the user enables notifications	• YouTube and Google — playback uses the official YouTube embedded player, and YouTube may store or access cookies and similar technologies on the user's device. The Google Privacy Policy and the YouTube Terms of Service are linked directly from this section. • Supabase, Cloudflare — session cookies for authentication and security • How to refuse — browser cookie settings, clearing app storage, and Google Ad Settings for cookies set by the embedded player; the section also states which features stop working if the user does so.
