

YouTube API Services — Compliance Evidence

Gala Labs Co., Ltd. | Project 197088978210 | Response to ToS Violations Report V.3 (August 19, 2026)

Finding — Policy III.F.2a (User Experience)

The report states the YouTube icon does not meet the 20 dp minimum height and asks that the icon shape and corners not be modified. The screenshot points at the **Long-form / Shorts toggle** on our Hot-Tube tab.

Status — resolved, and verified by direct pixel measurement

Location	Measured logo height	Minimum	Result
Tab bar	24 px	20 dp	Pass (+20%)
Long-form / Shorts toggle (flagged)	24 px	20 dp	Pass (+20%)
In-app guide list	24 px	20 dp	Pass (+20%)

The figures above are not container sizes. They were obtained by scanning the screenshot for contiguous #FF0000 pixels and measuring the bounding box of the red YouTube artwork itself — the same quantity your report measures.

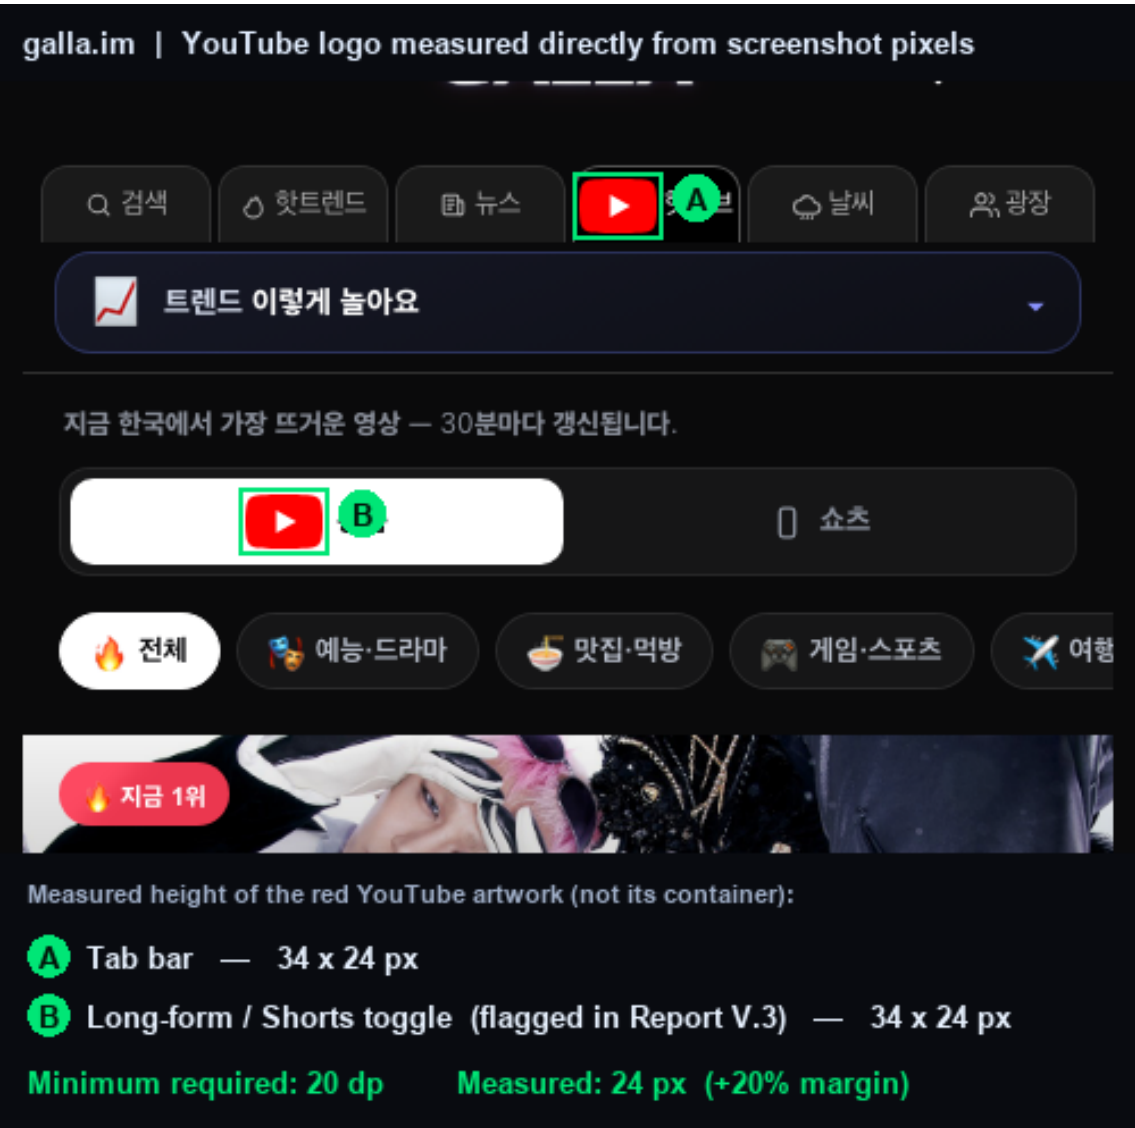

Figure 1 — galla.im/search?tab=hot, captured after deployment 0820102.

Why the icon renders at exactly the logo height

The official YouTube icon artwork occupies only 16.91 of the 24-unit viewBox height (ratio 0.7046). A 24×24 viewBox therefore renders a logo that is ~30% shorter than its box. We crop the viewBox to the artwork's own bounding box, so the element height *is* the logo height:

```
<svg class="yt-official" viewBox="0 3.545 24 16.91">
  <path fill="#FF0000" d="M23.498 6.186a3.016 3.016 0 0 0-2.122-2.136C19.505 3.545 12 3.545
..."/>
  <path fill="#fff" d="M9.545 15.568V8.432L15.818 12l-6.273 3.568z"/>
</svg>
```

Sizing is applied in one place, so it cannot be overridden elsewhere:

```
.yt-official { height: 24px !important; width: auto !important; }
.hv-mode-btn .yt-official { height: 24px !important; width: auto !important; }
```

Shape and corners are unmodified

Property	Computed value (live)
border-radius	0px
transform	none
clip-path	none
filter	none
opacity	1
artwork paths	official, unaltered

The rounded corners visible around the icon in the report screenshot belong to the **button** that contains it (border-radius: 10px, overflow: visible). No transform, clip or radius is applied to the icon, and the two artwork paths are the official ones, unaltered.

Timeline

Date	What
2026-08-18 09:26	20 dp remediation deployed to production — applied to all 8 icon locations, including the Long-form / Shorts toggle flagged in V.3.
2026-08-19	Report V.3 issued.
2026-08-20	Increased to 24 px (+20% over the minimum) so that rounding or measurement tolerance cannot bring it below 20 dp.

How to verify: open <https://galla.im/search?tab=hot> and run `document.querySelector('.hv-mode-btn .yt-official').getBoundingClientRect()` in the browser console. Height returns 24.
